OVERALL COMPLETION
58 / 100

Executive Summary: The app has a strong MVP core: clients can train, coaches can manage content and teams, and admins have a command center. The biggest gaps before a paid public launch are payments (Stripe), messaging, and production deployment.

OVERALL SCORE BY PILLAR

PILLAR	SCORE	SUMMARY
Client mobile app	78%	Core training, home, groups, booking, and nutrition are usable
Admin / coach portal	72%	Content, teams, schedule, and analytics are built; billing tab is not
Backend & data	68%	Most APIs work; payments and chat are still stubs
Monetization & billing	15%	Tier structure exists; real Stripe checkout is not wired
Infrastructure & launch readiness	40%	CI exists; no Docker, deploy pipeline, or broad test coverage

WHAT'S DONE (HIGH CONFIDENCE)

CLIENT EXPERIENCE — ~78%

- **Authentication (82%)** — Sign up, login, session management; forgot-password UI still pending
- **Home dashboard (85%)** — Stats, shortcuts, tier-aware navigation
- **Workouts library (85%)** — Weekly public + custom client workouts, search/filter

- **Active workout player (90%)** — Timer, set logging, crash recovery, completion flow, admin-edit drift protection
- **Groups & teams (85%)** — Join by code, leaderboards, geo check-in, coach athlete views
- **1-on-1 booking (82%)** — Active Client booking + session list; admin schedule management
- **Nutrition (75%)** — Weekly guides and macro plans; custom plan empty states still rough
- **Athlete combine stats (88%)** — Performance metrics and leaderboard inputs

ADMIN COMMAND CENTER — ~72%

- **Analytics dashboard (85%)** — Live user counts, MRR estimate, weekly workout engagement
- **Content studio (88%)** — Publish workouts, tutoring videos, nutrition; edit published workouts
- **Teams management (85%)** — Create bootcamps/teams, rosters, coach assignment
- **Schedule (85%)** — Bookings and availability

BACKEND — ~68%

- **Workouts API (88%)** — Create, edit, complete sessions, historical snapshots preserved
- **Groups API (85%)** — Full team/bootcamp lifecycle
- **Schedule API (85%)** — Booking and availability
- **Security (90%)** — JWT auth, role guards, rate limiting, env validation

WHAT'S STILL NEEDED (PRIORITY ORDER)

CRITICAL FOR REVENUE LAUNCH

ITEM	STATUS	EST. EFFORT
Stripe checkout & subscriptions	Stub only	High
Webhook-driven tier upgrades	Partial	Medium
Production backend hosting	Not deployed	Medium
App Store / Play Store release (EAS)	Config started, not shipped	Medium

IMPORTANT FOR FULL PRODUCT PROMISE

ITEM	STATUS	EST. EFFORT
In-app messaging / chat	Stub (no persistence)	High
Admin billing dashboard	Placeholder screen	Medium
Profile editing & progress tracking	Backend stubs	Medium
Push notifications on client devices	Backend partial, no client registration	Medium
Forgot password (client UI)	Backend ready, UI missing	Low

NICE-TO-HAVE / PHASE 2

ITEM	STATUS
AI / ML workout recommendations (beyond rules engine)	Stub
Real-time “Coach in Pocket” coaching	Stub
API documentation (/api/docs)	Not built

Docker / containerized deployment	Not started
End-to-end automated tests	Minimal

FEATURE COMPLETION SNAPSHOT

BUSINESS OWNER TAKEAWAY

You can demo and pilot today with real users on the training, scheduling, and admin content flows — especially if Active Client access is granted manually (dev bypass or direct DB tier assignment).

You cannot launch as a paid subscription product yet until Stripe is end-to-end and the backend is deployed to a stable production environment.

Recommended next milestone (target ~75% overall):

1. Stripe checkout + subscription webhooks
2. Deploy backend to production (Railway, Render, AWS, etc.)
3. Admin billing tab (even read-only Stripe dashboard link)
4. TestFlight / internal app build for owner review

Recommended launch milestone (target ~90% overall):

1. Add messaging or remove it from tier marketing
2. Client push notifications
3. Profile editing
4. E2E tests on auth → workout → booking
